

In the Name of God

SAMT has published a wide variety of ESP books in various scientific fields. The main objective of these publications is to teach English in a specialized familiar context in order to motivate the students to use specialized English sources and texts in a systematic way. Thus, it will help the students strengthen their ability to use specific sources and improve their exploitation skills. Since gaining such skills is necessary for the growth of one's knowledge in a specific field, it should be esteemed and appreciated as a key professional accomplishment.

This introduction is meant to infer that the students can take only the first step of the whole work by making efforts to learn the content of this work, and the rest of the work to gain professional efficiency should be done by the students' own integrity.

We hope this can be useful for the students and improve their English skills in a way that they can gain their educational objectives efficiently. We also expect curriculum designers and English teachers, who may deal with this work, to let the writers know its deficiencies and shortcomings and give their useful comments to remove such deficiencies in the next editions.
